A Low Carbon No Brainer

Use this [link](#) to access the article which is on page 58.

The government has a plan for the Green Industrial Revolution, how many points are there to this plan?

How many heat pumps are planned to be installed by 2028?

The national grid estimates by 2030 how much of the electricity will be from zero carbon sources?

In the national grid survey what percentage of respondents state that they see heat as a part of the UK carbon emissions total?

In order to move some of the financial burden, what may happen to the gas prices due to their larger carbon footprint?

Watch this video and then explain the main differences and advantages/disadvantages of each heat pump. https://youtu.be/k8Gz_-XiW5g
